Metal conduit fabrication is a technique used to join two or more surfaces of metals. This process is achieved through various methods. One such method is hammer welding or forge welding. The process involves using a hammer to join heated and softened metal, resulting in a strong bond. If the welding process is not perfect, rework might be necessary, leaving a little extra for corrections.

For the projects mentioned, you will need 11 x 17 x 5.8 16mm expanded polystyrene foam sheets and 5.8 PVA white glue to make a thicker block. You will also require ¾ schedule 40 PVC pipe, pieces of assorted lengths, and PVA white glue. This preparation is essential for fabricating conduits in electrical construction projects.

The purpose of conduit fabrication level 1 is to provide foundational knowledge and skills required for conduit fabrication and installation. This level covers basic concepts, techniques, and tools necessary for this process. It includes an overview of fabrication technologies and materials, enabling the creation of devices ranging from nanometer scale to meter scale solar devices.

This book is designed to be an accessible guide to conduit fabrication and welding, suitable for beginners or those looking to improve their skills in this area. It covers the fundamentals of metal fabrication and welding engineering principles, providing insights and tips for solving real-world problems and applications. The book is updated and includes new content that is ideal for classroom and job training.

For those seeking to improve their metalworking skills, this book offers practical exercises and guided coaching for understanding cutting, bending, and welding techniques. It is a comprehensive resource for learning and honing metal fabrication and welding skills, making it a useful tool for students across the state of Louisiana preparing for the ILEAP test.
