Fsr the international conference on field and service robotics is a robotics symposium which has established over the past ten years the latest research and practical results towards the use of field and service robotics in the community with particular focus on proven technology. The first meeting was held in Canberra, Australia in 1997. Since then, the meeting has been held every two years in the pattern: Asia, America, Europe. Field robots are non-factory robots typically mobile that operate in complex and dynamic environments on the ground of Earth or planets under the ground, underwater, in the air, or in space. Service robots are those that work closely with humans to help them with their lives. This book presents the results of the ninth edition of Field and Service Robotics FSR13, held in Brisbane, Australia on 9th-11th December 2013. The conference provided a forum for researchers, professionals, and robot manufacturers to exchange up-to-date technical knowledge and experience. This book offers a collection of a broad range of topics including underwater robots and systems, unmanned aerial vehicles, technologies and applications, agriculture, space search and rescue, and domestic robotics, robotic vision, mapping, and recognition.

The atomic force microscope (AFM) has become one of the leading nanoscale measurement techniques for materials science since its creation in the 2000s.
1980 s but has been gaining popularity in a seemingly unrelated field of science biology the afm naturally lends itself to investigating the topological surfaces of biological objects from whole cells to protein particulates and can also be used to determine physical properties such as young s modulus stiffness molecular bond strength surface friction and many more one of the most important reasons for the rise of biological afm is that you can measure materials within a physiologically relevant environment i e liquids this book is a collection of works beginning with an introduction to the afm along with techniques and methods of sample preparation then the book displays current research covering subjects ranging from nano particulates proteins dna viruses cellular structures and the characterization of living cells

This thesis aims to describe and interpret the effects of tourism on historic sites in Antarctica and Svalbard, also known as Spitsbergen, and to assess the implications for management. Explorers, whalers, seal hunters, scientists, and others have left many material remains in the polar regions that are significant because they tell the history of the exploration and exploitation of these regions. Contemporary polar tourism represents a new phase in this exploration and exploitation of the polar regions. The potential for the transformation of historic sites has increased following the substantial expansion of polar tourism. In recent decades, key cultural heritage sites are regularly included in standard tourist itineraries and are also the subject of specialized tourism. In this context, the central research question of this thesis is what are the effects of tourism on polar historic sites, and what are the...
